"Generation and initial analysis of more than 15,000 full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Uniterior and the inner and in the inner and of the inner some of the inner some of the inner some of the inner some of the inner some of the lysosomal membrane and in the lysosomal lumen, but also on the plasma membrane and in intracellular vesicles. TISSUE SPECIFICITY: Highly expressed in kidney, epididymis, followed by brain, spinal cord and weakly expressed in adrenal, heart, liver, lung and spleen.

DOWAIN: A C-terminal internalization signal (YGTL) appears to allow the targeting of plasma membrane proteins to endosomes. FTM: N-glycosylated (Probable).

FTM: Phosphorylation of tyrosine within the internalization signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Linkage (By similarity).

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-,
alpha-(2->8)-glycosaid linkages of terminal stallc residues in
oligosaccharides, glycoproteins, glycolipids, colominic acid and
synthetic substrates.
SUBDWIT: Interacts with cathepsin A (protective protein), beta-
galactosidase and N-acetylgalactosamine-6-sulfate sulfatase in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        results in inhibition of sialidase internalization and blockage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY: Belongs to family 33 of glycosyl hydrolases. SIMILARITY: Contains 4 BNR repeats.

A; Title: An 85-kilodalton surface antigen gene family of Trypanosoma cruzi encod
A; Reference number: A45622; MUD: 92107221; PMID: 1762630
A; Accession: A45622
A; Status: preliminary
A; Molecule type: mRNA
A; Residuence extracted from NCBI backbone (NCBIN: 74863, NCBIP: 74864)
C; Superfamily: trypomastigote-specific surface antigen
C; Keywords: surface antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28;

exo-alpha-sialidase (EC 3.2.1.18) - Salmonella typhimurium
N.Alternate names: neuraminidase
C;Species: Salmonella typhimurium
C;Species: Salmonella typhimurium
C;Date: 31-Dec-1992 #sequence
C;Accession: $20976; $233020; $23380; A33133
R;Hoyer, L.L.; Hamilton, A.C.; Steenbergen, S.M.; Vimr, B.R.
A;Title: Cloning, sequencing and distribution of the Salmonella typhimurium LT2 sialida
A;Reference number: $20976; MUID:9229952; PMID:1602967

INV 10-JAN-2003

3183 bp DNA linear INV 10-JAN-200 Trypanosoma cruzi TCTS-154 gene for trans-sialidase, complete cds. D50685 D50685.1 GI:840707

DEFINITION ACCESSION VERSION KEYWORDS SOURCE ORGANISM

RESULT D50685

ALIGNMENTS

Trypanosoma cruzi Trypanosoma cruzi Bukaryota; Euglenozoa; Kinetoplastida; Trypanosomatidae; Trypanosoma; Schizotrypanum. 1 (bases 534 to 1134) Uemura+H., Schenkman,S., Nussenzweig,V. and Bichinger,D. Only some members of a gene family in Trypanosoma cruzi encode proteins that express both trans-sialidase and neuraminidase

Eukaryota; Euglenozoa; Kinetoplastida; Trypanosomatidae;
Trypanosoma; Schizotrypanum.
1 (bases 54 to 1134)
Uemura, H., Schenkman, S., Nussenzweig, V. and Eichinger, D.
Only some members of a gene family in Trypanosoma cruzi encode
proteins that express both trans-sialidase and neuraminidase
